

The Cost of Traditional Workflows

vs.

the Value of Automation

See how manual processes create friction and how AI-powered automation with Novare™ by Greenway Health® helps providers save time, improve revenue, and focus on patient care.

Traditional Workflows		vs.	AI-powered Automation with Novare™	
	✗ Providers lose up to 2.5 hours / day with manual, time-consuming documentation that extends into after-hours charting.	Documentation		30% productivity gains 14,000 Hours saved annually ✓ Ambient clinical documentation transcribes patient-clinician conversations ✓ Agents surface summarized patient insights to create accurate medical notes in real time
	✗ Manual patient scheduling and intake create operational bottlenecks that directly reduce patient throughput and delay access to care.	Patient Throughput		Up to +2 Patients Per Day ✓ Automated scheduling ✓ Streamlined patient intake ✓ AI-driven workflow automation
	✗ Manual and outdated workflows affect the quality of the patient visit. The intake process is time-consuming, and providers focus on manual documentation instead of the patient.	Patient Visits		✓ Automated workflows reduce operational friction before, during, and after the patient visit, improving both the patient and provider experience.
	✗ Manual data entry and workflow fragmentation frequently lead to incomplete or inaccurate claims that require costly and time-consuming rework.	Claim Accuracy		✓ AI-assisted coding helps eliminate manual coding errors that can delay reimbursement and increase claim denials. Reducing errors upfront leads to cleaner submissions, fewer denials, and less rework.
	✗ Manual coding errors can delay prior authorizations, which prevents providers from getting paid for the work they are actually doing. Outdated patient intake processes slow daily patient volume and leave valuable revenue opportunities behind.	Revenue Capture		✓ Automating intake and authorization processes and leveraging assistive coding agents helps capture up to \$1M in additional revenue a >20% uplift Fewer handoffs and less rework protect revenue without additional steps.

Based on a 10-provider practice with 15 staff members, \$4.6M in annual revenue, and 46-48K encounters/year.
